---

Eric and Chip,

Attached is a figure that shows the location of the City stormwater outfall # 43. It is located on the downstream edge of the circle marked Cargill. This outfall drains an area of a potential PCB source. We were moving some of the sediment samples around this area at the last meeting and now have the information as to the outfall location that drains the specific upland area. It is suggested that a sediment core be located on the downstream side of this outfall.
